(a)
Tersoff Vegard line, 0 K
lattice constant (Å)
Ge fraction x
(b)
crystal
near-melting probe
amorphous probe
bond-angle spread (°)
temperature (K)
temperature (K)
(c)
first version, detected
second version, detected
harmful action (valid anomaly)
fraction of 50 trials
Ge fraction labels swapped
Si, Ge types swapped (x → 1 − x)
T label offset
near-melting rows
amorphous rows
batch with biased κ
κ unit slip
batch entered twice
true extra scattering in one regime
