support set 1 2 3 4
supports C1 C2 C3 C4
MACE-MP-0: 51 converged relaxations
Zhao et al., Lu et al.: sintered SiGe with C
DFT phonon BTE: 9 compositions, 5 temperatures
Starrydata2: sintered Si0.8Ge0.2 records
SiC scattering model (contrast bracket)
claim C1: carbon ends as SiC in Si-rich pockets
claim C2: sintered SiGe as 0.1 to 0.9 µm grains
C3: SiC, R ≥ 10 nm: ≤ 11% per at% C
C4: few-nm SiC: 13 to 27% per at% C
revising the bracket reaches C4 only
Ge saving at equal κ_L (C3, C4)
before the check 27 to 51%
after the first check 27 to 33%
after the radius checks 16%
